

Bioenergy Markets for Europe – New Conference & Trade Fair in Brussels

Reutlingen, Sept. 01st, 2009

With the growing importance of bioenergy in Europe the European Biomass Association AEBIOM and the REECO Group have pooled together to organize an international trade fair and conference for bioenergy – RENEXPO[®] Bioenergy EUROPE & AEBIOM European Bioenergy Conference. It will take place from June 30th – July 1st, 2010 at Albert Hall in Brussels, Belgium.

The REECO Group, trade fair and conference organizer with its headquarters in Germany, has also recognized that the improvement and further spread of bioenergy is a task for Europe as a whole. After successfully executing trade fairs and conferences dealing with the topics of renewable energy and energy-efficient building and renovation in Germany and in Central and South East Europe, REECO is now heading for the European capital – Brussels.

For this task REECO is cooperating with AEBIOM, the European Biomass Association, which will organize the AEBIOM European Bioenergy Conference. The conference will be a platform for market actors to exchange ideas and information as well as a discussion forum for policy makers. The participants will receive updates on ongoing EU legislation and gain an overview of the latest developments of the bioenergy market and the state of the National Renewable Energy Action Plans. Topics will include biogas, biofuels, heating and electricity.

At the same time the premiere of RENEXPO[®] Bioenergy EUROPE will take place. Around 30 international exhibitors from the fields of production, planning, and energy supply, as well as experts from research and development, associations, media, governmental agencies and administrations are expected to participate in the trade fair. There they will present their products, services and latest innovations to an estimated 500 visitors and 300 conference participants.

“The renewable energy directive has set ambitious objectives for 2020 for each member state of the European Union. Bioenergy, which represents 2/3 of renewables is expected to play a key role and its use should treble in the coming 10 years. All markets for heating/cooling, electricity and biofuels for transport are expected to rise significantly. Improved framework conditions and support schemes will create new bioenergy market opportunities, both for small and large companies.” – Heinz Kopetz, President of AEBIOM

The unique concept of the event, together with clearly defined goals at the ultimate location in Europe and the cooperation of two experienced European partners are the guarantee for the success of the new, trend setting, European bioenergy platform.
